

Royal Service & Rentals, Inc. of Broussard, Louisiana, is pleased to announce the addition of the SB-138MMS Sentinel® Smart Buoy to its arsenal of state-of-the-art, onshore & offshore industrial monitoring systems. After 10 years of tough field testing, in 23 countries and now backed by **Royal's Gold Standard of Service**, the Smart Buoy has earned its reputation for maintenance-free high performance and customization. The Smart Buoy stands alone as the industry's next - and smartest - move into the future.

THE 12-CHANNEL GPS TRACKING SYSTEM USES 100% INMARSAT SATELLITE TECHNOLOGY FOR DEPENDABLE AND ACCURATE TRACKING, 24/7 - 365 WORLDWIDE.

DESIGNED AND CALIBRATED TO MEET EXACT INDUSTRY STANDARDS, THE SYSTEM ALLOWS FOR SATELLITE COMMUNICATION AT ELEVATIONS AS LOW AS 5 DEGREES ABOVE THE HORIZON AND PROVIDES ACCURATE POSITIONING DATA WITHIN 4 METERS.

TRACKING DATA IS TRANSMITTED VIA SATELLITE TO ROYAL'S SECURE DATA COLLECTION WEBSITE WHERE IT IS ACCESSIBLE TO THE CUSTOMER FOR SELF-MONITORING OR ROYAL WILL PROVIDE MONITORING WHILE SUPPLYING THE CUSTOMER WITH NECESSARY MMS DATA.

SMART
BUOY
SMART MOVE

CUSTOMERS CAN ACCESS SATELLITE DATA OR RECEIVE REGULAR REPORTS AT THEIR DESKTOPS OR FROM ANY INTERNET-READY LOCATION.

The Sentinel® Smart Buoy can be used as a standard hazard or location identification buoy. When used in tandem with **Royal Service & Rentals'** Net Guards, the buoy brings its customers into immediate compliance with MMS #30-CFR250 in reference to temporary well abandonment requirements in 300 feet or less water depth, and, with USCG #33-CFR67 governing both the use of sub-sea protective covering devices and the automatic systems used in the open waters of the Gulf of Mexico.

**COMMON DEEPWATER DATA
MONITORING UTILIZATIONS:**

Net Guards • Sub-sea Trees • Well-head Sites • Sub-sea Debris
Pipeline Locations • Other Sub-sea Locations
